unqork

Grid System

Build powerful grids with an intuitive configuration experience

The Grid System is an entirely new holistic grid system featuring a collection of grid components with a common and consistent set of principles and functionality. This new system offers a more cohesive configuration experience, supports a wider variety of use-cases and UX patterns than before, and offers more extensibility for feature enhancements.

Support more UX & UI patterns
Configure a variety of grid patterns easily so you can service a more comprehensive array of design requirements

Support more use cases
Unlock a wide variety of use cases from simple data entry to data exploration & data analysis
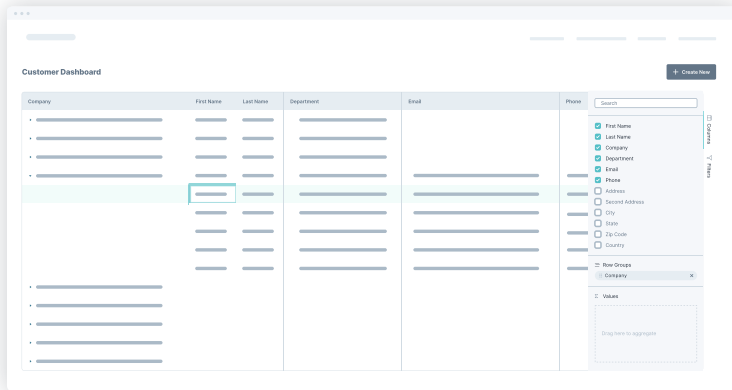

Simplify Configuration
Improved configuration & advanced tooling enables you to build applications better & faster than ever before

Consistent Capabilities
Consistent data structure & advanced logic capabilities allow you to build more complex use cases easily

Unqork's new Grid System consists of the following three components:

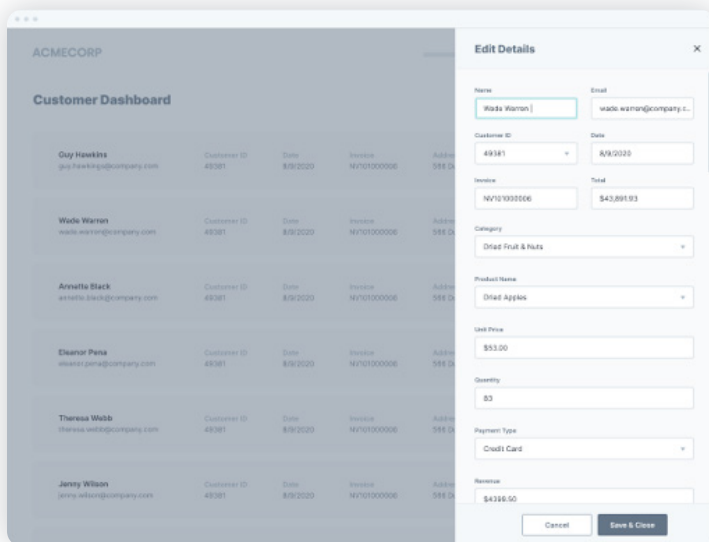

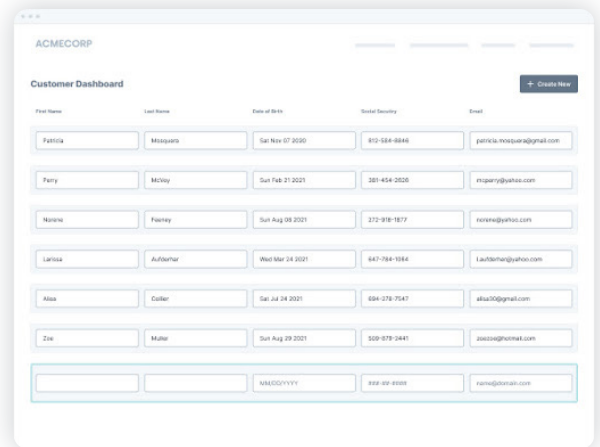

Dynamic Grid

Spreadsheet-like inline editing for fast data entry, analysis, and exploration. (Now available)

- Spreadsheet-like editing experience
- Column driven configuration
- Rich user experience patterns
- Comprehensive support for calculations
- Data exploration & analysis

Inline Grid

Component-based inline editing leveraging the full power of Unqork's input components. (Available Q1 22)

- Rich inline editing experience
- Embed powerful Uncork components within cells
- Extensive custom styling and UX patterns
- Comprehensive support for business logic & calculations

Free-Form Grid

Form-based row layouts for rich layout and content consumption. (Available Q1 22)

- Form-based row layouts allows for custom layout & UI options
- Embed Unqork components within rows to build powerful forms and layouts
- Supports multiple summary-detail hierarchical UX patterns
    - Summary Views: Rows & Table
    - Detail Views: Accordion, Modal, Side-Bar
- Comprehensive support for business logic & calculations

Unqork and the no-code revolution

No-code is a new class of cloud-based development platform that empowers organizations to rapidly build robust enterprise-grade software without writing a single line of code. Advanced no-code platforms such as Unqork come "out-of-the-box" (or out-of-the-virtual-SaaS-box) with all the toolsets and elements necessary to build and manage a robust application (e.g., front-end UX, workflow, rules engine, analytics, integrations, and maintenance). Since they're all components of the same unified platform, everything works together in instant harmony. With no-code, organizations can devote all their development resources to addressing business challenges instead of technical ones.
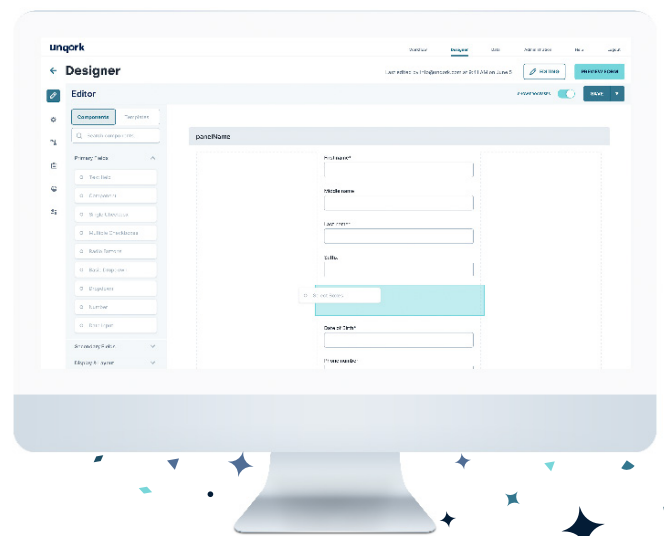

Also, by eliminating the need to write code from the building process, no-code expands the scope of who is doing the development. In a no-code platform, users (or **'Creators'** as we refer to them at Unqork) build applications by drag-and-dropping configurable elements representing both user-facing features and back-end application logic. While modern programming languages (Java, Python, etc.) can take a year to learn and a decade to master, no-code can be picked up in **just a few weeks**, making development more collaborative and recruiting more flexible.

Unqork: the world's first enterprise no-code application platform

Unqork is specifically designed to address the challenges of the world's most complex and regulated service environments, including **financial services**, **insurance**, **healthcare**, and **government**. We levy decades of industry-specific experience from our in-house experts to take on each sector's most critical challenges.

Unqork has backing from some of the world's most disciplined investors, including Goldman Sachs, Capital G, and BlackRock. Our technologies have been adopted by leading organizations, including Liberty Mutual, Marsh, Pacific Life, and Goldman Sachs, just to name a notable few.

Our clients can achieve unparalleled speed and flexibility in their development function while requiring a fraction of the resources. We can deliver these benefits through:

A unified SaaS platform

Unqork boasts dozens of components and capabilities related to **compliance** (up-to-date rules engines for FATCA, UK CDOT, Dodd-Frank, and more), **security** (native encryption, RBAC, and crowd-sourced penetration tests), and **application management** (SDLC governance, historic versioning, and module management).

Completely visual UI

Applications are built via an intuitive, visual User Interface (UI) featuring drag-and-drop components representing user-facing elements, backend processes, data transformations, third-party integrations, and a growing library of industry-specific templates.

Enterprise-grade standards

Unqork comes with enterprise-ready compliance (e.g., SOC2, GDPR, Privacy Shield compliant, etc.). We have complete security capabilities, including proprietary RBAC solutions, and we provide BCP and DR support for applications built on our platform.
